RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB – 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

		settings.			
Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk.	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100
DOCUMENTATION REQUIREMENT

Student Name: Aspacio, Gian Paul J.

Date: 0/26/2026

VM Name: VM_Aspacio

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM 8 GB (8000MB) CPU Cores 4

Hard Drive Size 100 GB (Dynamic / Fixed) Storage Controller

SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used ubuntu-26.04-desktop-amd64.iso

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if

any.) 1. Click *New* to create new Virtual Machine.

2. Type Name and select ISO image.

3. Set up Username and Password.

4. Select the Base memory and CPU cores for the virtual machine

5. Select Desire Hardware Storage, then review all the info and click finish.

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue	Solution
The iso file is corrupted	Download a new iso file and reinstall

4. Verification Screenshots

(Paste screenshots here or attach separately)

- VM Settings (Memory, CPU, Storage)
- ISO Attached / Boot Order
- Installation Progress
- Final Desktop with Terminal Open

Create Virtual Machine

Unattended Guest OS Install Setup

You can configure the unattended guest OS install by modifying username, password, and hostname. Additionally you can enable guest additions install. For Microsoft Windows guests it is possible to provide a product key.

Username and Password

Username: ✓

Password: ⓘ

Repeat Password: ⓘ

Additional Options

Product Key:

Hostname: ✓

Domain Name:

☐ Install in Background

☐ Guest Additions

Create Virtual Machine

Hardware

You can modify virtual machine's hardware by changing amount of RAM and virtual CPU count. Enabling EFI is also possible.

Base Memory: 8000 MB

Processors: 4

☐ Enable EFI (special OSes only)

Create Virtual Machine

Virtual Hard disk

If you wish you can add a virtual hard disk to the new machine. You can either create a new hard disk file or select an existing one. Alternatively you can create a virtual machine without a virtual hard disk.

☒ Create a Virtual Hard Disk Now

Disk Size:

100 GB

4.00 MB
2.00 TB

☐ Pre-allocate Full Size

☐ Use an Existing Virtual Hard Disk File

VM_Aspacio.vdi (Normal, 100.00 GB)

☐ Do Not Add a Virtual Hard Disk

Create Virtual Machine

Summary

The following table summarizes the configuration you have chosen for the new virtual machine. When you are happy with the configuration press Finish to create the virtual machine. Alternatively you can go back and modify the configuration.

Machine Name and OS Type

Machine Name	VMAspacio
Machine Folder	C:/Users/COLLEGE STUDENT/VirtualBox VMs/VMAspacio
ISO Image	C:/Users/COLLEGE STUDENT/Downloads/ubuntu-26.04-desktop-amd64. ...
Guest OS Type	Ubuntu (64-bit)
Skip Unattended Install	false

Unattended Install

Username	vboxuser
Product Key	false
Hostname/Domain Name	VMAspacio.myguest.virtualbox.org
Install in Background	false
Install Guest Additions	false

Hardware

Base Memory	8000
